

Cyclone Yasi Sue & Neville Brow- Homeowners Mission Beach QLD

"We installed Breezway Altair™ Louvres simply because they are more modern than sliding windows and they provide great cross ventilation. We saw Breezway Louvres on display at the HIA home show in Sydney and liked them so much we specified the product to our designer. We installed decowood aluminium blades in the bedrooms because they are so easy to keep clean and chose tinted glass blades in the living areas so we could enjoy the beautiful ocean views."

"We weren't home during the cyclone but our builder was because he and his wife had nowhere else to go so they stayed downstairs in the bunker room. The louvres performed well and we are so happy with them. They are such a great product. The sliding glass windows leaked all through the house but it wasn't our choice to have the sliders installed in the kitchen and the study (this was due to insurance cover). We have air conditioning installed but only use it when the wind gets too gusty and noisy up here on the hill."
